

PROFESSIONAL SUMMARY

Highly analytical Software Engineer with 3+ years of experience specializing in scalable front-end architectures and full-stack system optimization across high-volume enterprise platforms. Proven track record as a Frontend Engineering Lead, driving the development of responsive React/Angular layouts while collaborating effectively with cross-functional product and infrastructure cohorts. Expert in bridging data contracts through Node.js and Express.js applications, backed by direct exposure to enterprise Java and Go microservices during critical on-call infrastructure rotations. Recognized for exceptional technical documentation skills (ERDs), driving organizations' Centers of Excellence (CoE), and establishing modern containerized workflows with Docker and Kubernetes to ensure robust system availability and real-time observability.

CORE SKILLS

Frontend Architecture:	React.js, Angular, JavaScript (ES6+), TypeScript, JSX, HTML5, CSS3, Tailwind CSS, Bootstrap, Shared UI Component Libraries
Full-Stack & APIs:	Node.js, Express.js (Primary Backend Build Stack), RESTful API Design, System Data Contracts, SQL Database Optimization
Enterprise Exposure:	Java/Spring Boot, Go (Codebase Navigation, Bug Fixes, and Production On-Call Management)
Cloud & Observability:	Docker, Kubernetes, Datadog (System Monitoring & Performance Diagnostics), Git, GitHub, GitLab, CI/CD Pipelines
Leadership & Agile:	Frontend Squad Leadership, Engineering Requirements Documents (ERDs), Cross-functional Alignment, Agile/Scrum, Center of Excellence (CoE) Blueprinting

PROFESSIONAL EXPERIENCE

Software Engineer	Jun 2024 – Present
Innova Solutions Hyderabad, India	

- Frontend Squad Leadership:** Anchored the end-to-end front-end architecture, layout refinement, and optimization initiatives for Uber Freight's high-traffic logistics management application utilizing React and TypeScript.
- Cross-Stack Codebase Navigation:** Maintained dual-track agility by driving primary frontend features while supporting cross-stack infrastructure; navigated complex Java and Go microservices backend networks during critical on-call shifts to diagnose anomalies and secure data contracts.
- Cloud & Container Workflows:** Standardized multi-branch application setups by creating isolated container environments via Docker and coordinating deployment integrity metrics with Kubernetes to eliminate stage friction.
- Component Engineering:** Spearheaded the development of an extensive corporate reusable UI component library, eliminating redundant code blocks across modular tracks and accelerating feature delivery by 25%.
- System Monitoring & Observability:** Integrated comprehensive Datadog alerting layers and query metrics across active client-side dashboards to monitor transactional performance, optimize request latency, and sustain operational uptime.
- Technical Ownership:** Authored extensive Engineering Requirements Documents (ERDs) detailing front-end specifications, workflow mappings, and edge cases to ensure alignment between business stakeholders and code delivery.
- Mentorship & Standards:** Directed technical workshops, served as an engineering interviewer for internal recruitment panels, and guided junior trainees on robust version control paradigms using Git, GitHub, and GitLab.

- **Module Development & Integration:** Engineered core application elements for internal tools including role-based access control (RBAC) schemas, background batch processing layers, and scalable enterprise notification modules.
- **Data Visualization & Analytics:** Created rich dashboard panels and interactive data narrative modules leveraging modern charting engines to synthesize multi-dimensional operational metrics into actionable insights.
- **Incident Remediation:** Resolved high-severity client production tickets by tracking and debugging anomalies across complex UI scripts, validating system stability for multi-tenant internal environments.
- **Agile Execution:** Maintained continuous alignment with product roadmaps via strict adherence to active Agile/Scrum practices, contributing to blueprint mappings, code reviews, and production release cycles.

KEY PROJECTS

Uber Freight Core Platforms (Orders, Shipments, Planning) — Frontend Lead & Full-Stack Contributor

- Spearheaded front-end design systems for core routing and route optimization workflows. Managed data flow translations to roll out user-facing features like algorithmic "Quick Quote" panels and Less-than-Truckload (LTL) widgets. Evaluated cross-stack contracts against Java and Go backends to optimize overall system response latency.

Clix Revenue Platform (Clinithink) — Software Engineer

- Designed and enhanced high-fidelity UI modules tailored for sensitive healthcare billing and revenue management systems, maintaining close coordination with technical rules and accessible layout guidelines.

Activity Tracker & FTP Training Infrastructure — Project Module Owner

- Owned the end-to-end delivery of student and tracking interfaces backed by modern Node.js and Express.js integration scripts. Configured charting arrays for leaderboard data visualizations and constructed standard containerized setup blueprints using Docker scripts.

EDUCATION

Bachelor of Technology (B.Tech) — Sree Nidhi Institute of Science and Technology Hyderabad, India

HONORS & ACHIEVEMENTS

- **Innova Idol:** Honored with the annual company-wide award recognizing exceptional technical contribution, project management efforts, and delivery dedication.
- **Customer Champion:** Received special commendation from enterprise clients for exceptional execution during high-stakes structural migrations and infrastructure onboarding.
