PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience building and scaling enterprise logistics applications (76M+ requests/year) using React, TypeScript, Angular, Node.js, and Express.js. Led ground-up React rebuilds of legacy JSP/JSF and Angular modules, built a shared component library and an OpenAPI-driven type/client generator adopted across 9+ teams, and drove production reliability through Jest/Storybook test coverage, Jenkins CI/CD pipeline ownership, and Kubernetes-based regional rollouts.

SKILLS

Frontend	React.js, Angular, TypeScript, JavaScript ES6+, JSX, HTML5, CSS3, Tailwind CSS, Bootstrap, Reusable UI Component Libraries
Backend	Node.js, Express.js, RESTful APIs, OpenAPI/Swagger, Microservices, Data Contracts, SQL, Java and Go Service Debugging
Testing	Jest, Storybook (Component Stories & Visual Snapshot Testing), Automated Build Health/Integration Checks
Cloud & DevOps	Docker, Kubernetes, Jenkins CI/CD Pipelines, Regional Deployment Rollouts, Datadog, Git, GitHub, GitLab
Engineering	System Design, Engineering Requirements Documents, Production Support, Incident Debugging, Agile/Scrum, Code Reviews
Leadership	Frontend Squad Leadership, Feature Scoping, Cross-functional Collaboration, Mentoring, Technical Interviews
AI Tools	Cursor, Codex, OpenCode, Claude Code, GitHub Copilot, Warp, AI-assisted Development, Workflow Automation

EXPERIENCE

Software Engineer

Innova Solutions – Uber Freight

Jun 2024 – Present

Hyderabad, India

- Led frontend engineering and end-to-end feature delivery for Orders, Shipments, and Planning modules within Uber Freight's enterprise logistics platform (76M requests/year) using React and TypeScript, rebuilding Order Entry and Shipment Entry from legacy JSP/JSF into React/TypeScript v2 applications that drove measurable increases in user adoption over the legacy UIs.
- Built an OpenAPI/Swagger-driven code-generation library that produced typed API clients and shared TypeScript types (types.ts) from backend contracts, standardizing frontend-backend integration and adopted by approximately 9 teams organization-wide.
- Designed and shipped an LTL (Less-than-Truckload) freight class recommendation engine that calculates recommended class from user-provided weight, volume, and shipping dimensions, eliminating manual class selection for LTL shipment orders.
- Built the Provider Assignment feature end-to-end, integrating a rates service to surface real-time quick quotes and transit estimates in a tabular comparison view, plus a spot-quote workflow for manual carrier (SCAC) and rate assignment on non-standard shipments.
- Built a shared UI component library – covering page layout primitives, location lookup, and custom handling logic – that became the standardized UI/UX foundation across all 4 apps in the monorepo, eliminating duplicate implementations across teams.
- Maintained Jest unit tests and Storybook component stories with visual snapshot testing as a required diff-build check, catching UI regressions before merge across the component library and application codebases.
- Owned the Jenkins CI/CD pipeline for the team's services, monitoring builds, triaging failures, and managing promotion through test, UAT, and alpha environments ahead of production release.

- Managed production deployment and Kubernetes-based regional rollouts (approximately 1 hour to propagate across all regions) and led a production domain migration to uberfreight.com, holding production release access and ownership end-to-end.
- Increased engineering productivity by approximately 30% by building and introducing custom AI skills and MCP integrations on top of existing tools, and leveraging in-house automation to accelerate implementation, testing, debugging, and documentation using Cursor and Claude.
- Served on a PagerDuty on-call rotation across 9 owned services, actively participating in triage calls and debugging for 17 production incidents over 12 months (including 2 SEV-1s, median resolution time 3 hours), by tracing API failures and coordinating cross-team resolution with Java/Go backend owners.
- Built and maintained 29 Datadog monitors and alerts across error rate, latency, RUM, and synthetic checks spanning 4 production services to enable proactive incident detection.
- Mentored junior engineers, conducted technical knowledge-sharing sessions, participated in interview panels, and contributed to code-review and engineering standards for a 5-person frontend team within a 15–20 person cross-functional org.

Associate Software Engineer
Innova Solutions

Jul 2022 – May 2024
Hyderabad, India

- Developed responsive enterprise application modules using React, Angular, JavaScript, TypeScript, HTML, and CSS.
- Built and integrated Node.js and Express.js services and REST APIs for internal application workflows and data-processing features.
- Implemented role-based access control, notification modules, batch-processing capabilities, and reusable application components.
- Investigated and resolved production incidents by debugging frontend behavior, validating API responses, and performing root-cause analysis.

PROJECTS

- **Clix Revenue Platform – Clinithink.** Designed and enhanced responsive user-interface modules for a health-care revenue-management platform. Integrated frontend workflows with APIs while maintaining accessibility, reliability, and secure handling of business-sensitive information.
- **Activity Tracker and FTP Training Platform.** Owned frontend modules and Node.js integration layers for an internal training and activity-tracking application. Developed leaderboard dashboards, chart-based reporting, user-management workflows, and Docker-based development setup.
- **Telugu Optical Character Recognition System.** Built a CNN/ResNet-based deep learning OCR system to classify Telugu script characters, applying image preprocessing and regularization to improve accuracy.

EDUCATION

Master of Technology
Jawaharlal Nehru Technological University Hyderabad
Specialization: Digital Systems and Computer Electronics

2022 – 2024
Hyderabad, India

Bachelor of Technology
Sreenidhi Institute of Science and Technology

2018 – 2022
Hyderabad, India

ACHIEVEMENTS

- **Innova Idol Award:** Received a company-wide recognition for technical contribution, project ownership, engineering leadership, and delivery excellence.
- **Customer Champion Recognition:** Recognized by enterprise stakeholders for successful execution during critical application migrations and infrastructure onboarding.
- Selected to conduct technical interviews, mentor junior engineers, and lead internal engineering knowledge-sharing sessions.
